

Visitor Management System

This system is about keeping the record of the visitors coming to the organization to meet the officials. The system will generate the pass for the visitor and keeps the record of the meeting held i.e. to whom the visitor meets at what time and where. The pass is generated with the photo of visitor, and an e-mail will be sent to the host of visitor via our application.

This system has two applications Server application and client application. Server application is used to create masters and on the basis of master tables data the client application will work.

Front end: C#.net and VB.net

Back end: MS Sql server 2008

Features : Standard Version

- All the visitor entries will be maintained in VMS.
- A Camera takes the photo of the visitor at the entrance (Photographic records of visitor)
